PART I.

ADMINISTRATIVE REPORT FOR THE FISCAL YEAR 1909.

LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR, WEATHER BUREAU,
Manila, July 31, 1909.

SIR: I have the honor of submitting my annual report as Director of the Weather Bureau for the fiscal year July 1, 1908, to June 30, 1909. As will be seen, the same follows closely the order observed in previous documents of the same nature, except that a new heading has been adopted for the closing chapter. I am happy to say that the appropriation bill for the fiscal year 1910 will enable this Bureau to overcome the difficulties experienced hitherto regarding the inspection of stations and the supplying of places of first- and second-class observers absent on leave. Hence, these will not be mentioned again.

Very respectfully,

JOSÉ ALGUÉ, *Director.*

Hon. DEAN C. WORCESTER,
Secretary of the Interior, Manila, P. I.

ADMINISTRATIVE REPORT OF THE DIRECTOR OF THE WEATHER BUREAU FOR THE YEAR 1909.

I. MANILA CENTRAL OBSERVATORY.

1. DEPARTMENTS OF THE CENTRAL OBSERVATORY.

(a) THE METEOROLOGICAL DEPARTMENT.

Employees and hours.—During the past fiscal year there has been no change in the number of employees occupied in the meteorological department as far as authorized positions are concerned. Owing, however, to the arrangement for the training of aspirants which has been reported last year, there were some slight fluctuations in the number of men actually working. As to the work, it is clear that it had to be the same as in past years.

The necessary authorization having been obtained, the office hours of the Weather Bureau have been changed from those fixed by Executive Order No. 30, series of 1907, to the following: 7.30 a. m. to 12.30 p. m. and 2.30 to 4.30 p. m. The reason is this: With the exception of the five members of the staff, the whole personnel of the Central Office consists of Filipinos. These are accustomed to take the principal meal at about noon and to have a long pause before commencing the afternoon's work. Any interference with this habit lessens their efficiency; at least this is the experience of the Weather Bureau. As the employees desired the change in hours, the same has been made with mutual satisfaction. This does not imply that the Office is closed between 12.30 and 2.30, since from 6 a. m. to 7 p. m. there is always—even on Sundays and legal holidays—at least one employee on duty. Should anything turn up which requires the intervention of an officer, these are always near at hand, as they live in the same compound.

During the fiscal year just ended, the employees of the Central Office have worked 1,516 hours of overtime.

The number of instruments compared and adjusted for outsiders is as follows: Aneroid barometers, 142; mercurial barometers, 5; barographs, 3 ; total, 150. In comparison with the preceding year, this is a falling off of 83.

Rev. George M. Zwack, secretary of the Weather Bureau, finally saw himself forced by poor health to leave the Islands for an extended vacation in the United States, from which he returned *via* Europe in May, 1909. A combination of circumstances prevented his achieving as much good for the Weather Bureau as he had intended. The only two important centers which he could visit were the United States Weather Bureau at Washington and the Imperial Central Station for Earthquake Investigation at Strassburg, Germany.

Spreading of information within the Archipelago.—The great inconvenience caused by the fact that the telegraph operator of the Weather Bureau was present only during office hours and was entitled to leave of absence—as mentioned in two previous reports—has finally been eliminated. In accordance with the provisions of Act No. 1698, section 18, two operators, each with an entrance salary of ₱50 per month, have been appointed in lieu of one observer-telegrapher with an annual compensation of ₱1,800, thus incidentally saving ₱50 per month until the time when the new appointees will have to receive an increase in salary. Naturally enough, the young men have not the meteorological experience of the former incumbent, who usually detected at once any error in the figures and would ask to have them verified; but they will improve with time, and even now their services are quite satisfactory. The new arrangement went into effect on November 1, 1908.

An improvement of the utmost importance is due to the generous coöperation of the Director of Posts. Whenever dangerous weather conditions demand it, the Weather Bureau has been authorized to request that as many telegraph offices as may be necessary for the proper warning of the threatened provinces be kept open as long as the danger lasts. That the Weather Bureau is not disposed to abuse this privilege may be gathered from the fact that, the stormy character of the last months of 1908 notwithstanding, it has thus far been used only once. On September 5 it was judged necessary that five stations be kept open until 10 p. m. This action of the postal authorities will be fully appreciated by all those who realize what lack of communication may mean during a severe typhoon.

Provided that all the Insular telegraph and cable lines are in working order, the Observatory receives daily telegraphic reports from, and sends the daily weather note to, 35 stations. Typhoon warnings are wired to those stations to which they are deemed useful. Aside from the meteorological stations, weather notes and storm warnings are sent likewise to the port of Manila (Surveyor of Customs), the naval stations at Cavite and Olongapo, and the quarantine station at Mariveles. To these addresses have been added during the year, at the request of the respective parties, the Bureau of Navigation and (since June 18, 1909) Fort Mills on Corregidor Island.

Unfortunately several stations in the south of the Archipelago have been cut off repeatedly from telegraphic communication with Manila. Conditions have been especially bad as regards Surigao, Zamboanga, and Jolo. Surigao sent its last dispatch on November 30, 1908, while not a single one passed between the two last-named places and Manila during the entire fiscal year 1909.

Foreign cable correspondence.—The foreign cable correspondence of the Weather Bureau has been substantially the same as described in last year's report. An 8 a. m. observation has been cabled daily to the United States Weather Bureau *via* San Francisco, the expenses being borne by the recipient. The Eastern Extension, Australasia and China Telegraph Company and the Great Northern Telegraph Company have continued their inestimable services to the public as in former years, with the one, not very important modification that after the last International Cable Conference only the usual cablegrams are transmitted free of charge. These include the daily weather reports and eventual typhoon warnings between the various meteorological centers as customary hitherto. Thus, for instance, when Hongkong Observatory requested additional reports from Aparri or some other station to be sent during typhoons, it made arrangements with the cable company to have them forwarded "collect." The only difference which the new regulation has thus far made as concerns the Weather Bureau is this, that now we have to pay for the reports of our stations at Iloilo and Cebu whenever—owing to breaks in the Government's cables—these are transmitted *via* commercial cable.

The special telegraph line connecting the Observatory with the office of the Eastern Extension Cable Company which was mentioned last year, has been established and is in use since August 28, 1908. The Bureau of Posts constructed the line at a cost of ₱264.79, while the two Morse writing machines and accessories cost an additional ₱475.81, making a total of ₱740.60. The acquisition of the Morse machines was made necessary by the fact that several of our employees have been telegraph operators during

Spanish times, but are not used to receiving by sound. In view of the great convenience and dispatch which this line offers over the old method of calling for the dispatches by messenger, the somewhat heavy cost is by no means regretted.

During the period covered by this report 91 typhoon warnings have been sent each to Tokyo, Zikawei, Taihoku, Hongkong, and Phulien, as against 41 during the preceding year. It is not surprising that their number is always greater during the first half of the fiscal year than during the second, since the former includes the "typhoon season;" but this year's record of only 7 warnings during the period January to June, 1909, and 84 during July—December, 1908, is surprising. The former months have been as tranquil as the latter have been stormy.

(*b*) THE ASTRONOMICAL DEPARTMENT.

The time service.—The astronomical department carried on the work entailed by the daily telegraphic time service. For this purpose a large number of star transits have been observed in order to determine therefrom the error and rate of the various clocks; and the constants of the transit instrument have been verified repeatedly.

The Bureau of Navigation having erected a high steel mast on Engineer Island and installed a time ball, the latter is daily dropped at 12 noon by electric transmission, in addition to the one on the tower of the Observatory. The same mast serves likewise for the display of an additional set of typhoon signals.

The number of chronometers rated is 24, the same as during the preceding year. It appears to be not generally known among shipmasters that this service is performed gratuitously, as otherwise probably more would avail themselves of the opportunity.

As in former years, the correct time of the one hundred and twentieth meridian has repeatedly been requested by ships at Guam and sent them *via* the cable of the Commercial Pacific Cable Company.

The attempt to determine the geographical coördinates of Mirador Observatory will be mentioned in Chapter V.

Astronomical data.—Various astronomical data requested by Army officers for topographical work and other purposes have been computed and furnished to them.

(*c*) THE SEISMIC DEPARTMENT.

Philippine earthquakes.—During the period under consideration, 130 earthquakes have been felt in the various regions of the Archipelago, as against 153 in the last, and 126 in the last but one fiscal year. Of these 130 perceptible disturbances 43 occurred in Luzon, 25 in the Visayas, and 62 in Mindanao and Jolo. Only 8 slight shocks have been felt in Manila, most of these on October 20 and 21, 1908. This number exceeds that for the preceding year by 2. The strongest earthquake of the year was the one which shook eastern Mindanao on March 18, 1909.

The fact that out of a total of 130 earthquakes perceptible in the Archipelago the microseismographs at Manila registered only 48—of which 23 had their epicenters on Luzon and 25 in the Visayas—shows that the majority of this year's disturbances had their foci at shallow depths, wherefore the seismic waves failed to reach great distances from the centers of origin.

Microseismic movements.—Aside of the 48 earthquakes mentioned in the preceding paragraph, the instruments of Manila Observatory registered 94 disturbances which had their origin within the Archipelago, especially on Luzon Island, or in the adjacent seas, but, as far as we know, have not been perceptible anywhere.

Far distant earthquakes.—In addition to the perturbations spoken of, the microseismographs gave indications of 88 far distant earthquakes. Many of these baffled all attempts at identification and appear to have been of submarine origin. The difficulty is especially great regarding the frequent shocks occurring in the Indian and Pacific Oceans. With a view of solving the mystery we have asked for and obtained monthly reports on microseismic movements from Australia, Japan, and Java.

The more important of the far-distant earthquakes which during this year have been registered at Manila and could be identified are the following:

1908.—July 1, Formosa; September 21, District of Puna, Hawaii; December 28, Messina disaster.

1909.—January 23, Luristan, Persia; February 2, Celebes Group; February 3, Sumatra; February 15, Bulgaria; February 22, Siwas, Asia Minor; March 13, Japan; March 17 and 18, Celebes Group; March 23, Japan; April 15, Formosa; April 27, New Guinea; June 4, Sumatra.

Foreign correspondence.—The seismograms of the Messina earthquake traced by the Manila instruments have been reproduced by photography and copies furnished to the central seismic stations of Germany, Italy, and Japan. Other information on the same phenomenon has been forwarded to those who asked for same.

A provisional seismological bulletin has been sent to 33 addresses of seismologists every month, whenever possible, before the 15th of the following. As already stated, the Weather Bureau is now receiving similar information from Australia, Japan, and Java.

Earthquake Catalogue and notes.—In the numbers of the Monthly Bulletin corresponding to the year 1908, Rev. Miguel Saderra Masó, Assistant Director of the Weather Bureau, has published a Catalogue of Philippine Earthquakes, covering the last fifty years. The Bulletin for 1909 will contain special studies on the seismicity of the various regions of the Archipelago.

New seismograph.—A horizontal-pendulum seismograph has been mounted at Baguio, and experiments looking toward improvements in our seismic apparatus are still in progress.

(*d*) THE MECHANICS' SHOP.

As usual, the time of the mechanics has been consumed almost entirely by the work necessary to keep the instruments of the Central Observatory and the secondary stations in good order. Nobody who is familiar with the destructive action of the elements in the Tropics and the large instrumental equipment of the Weather Bureau will find this a matter of surprise. They have, however, constructed a horizontal-pendulum microseismograph for the recording of both Insular and far distant earthquakes. Mounted in Mirador Observatory, Baguio, since January, 1909, it has already produced some excellent seismograms. The mechanics have likewise mounted the instruments of the said observatory. Any time left over from more urgent work has been devoted to experiments with various devices for the improvement of existing seismographs and to work on the registering rain gauges mentioned in last year's report. One of these has been finished and forms part of the equipment of Mirador Observatory. A few surveyor's compasses, sextants, and theodolites have been adjusted.

2. PUBLICATIONS.

(*a*) ORDINARY PUBLICATIONS.

The ordinary publications of the Weather Bureau comprise the Monthly Bulletin and the Annual Report.

The Monthly Bulletin.—The Monthly Bulletin continues to appear behind time, despite the determined efforts to the contrary. A slight gain has, however, been made. On July 1, 1909, the Bulletin for October of the preceding year was printed, but had not yet been received by the Weather Bureau, and that for November was being printed—just about as matters stood on July 1, 1908, respectively—but this year the Bulletin for January, 1909, was ready for distribution and the manuscript for February nearly ready for the printer. The reason for this inversion lies in the great number of typhoons which distinguished the last months of 1908 and made it desirable to gather as many data as possible. As the demand for such Bulletins as contain descriptions of especially severe or otherwise interesting typhoons is usually very large, reprints have been made of the corresponding parts of the Bulletins for May, July, September, and October, and will be made of that for December, 1908.

The Annual Report.—The publication of the Annual Report is less satisfactory. The first parts of the reports for 1906 and 1907 have indeed been printed and distributed, but of the second part for 1906 only one-half of the manuscript, containing the observations of the secondary stations during January to June, 1906, is almost ready for the press.

(*b*) SPECIAL PUBLICATIONS.

Instructions for observers.—The work of Rev. Saderra Masó, spoken of last year as in preparation, has been printed at the expense of Manila Observatory. It is a handsome pamphlet of 86 pages in small quarto, with 6 plates (4 containing numerous figures), 3 half-tone engravings, and 3 cuts. The title is: "Instrucciones Practicas y Breves Nociones de Meteorología para los Observadores del Weather Bureau" (Manila, Santos y Bernal, 1908). One copy has been presented to each of the secondary stations, and they will be kept supplied with the book in future, but otherwise there is no free distribution of this publication.

Publication of old observations.—This work, likewise mentioned last year, is progressing slowly, as there is plenty to do in the Office which cannot be neglected on account of this undertaking. During the year have been printed the Bulletins for December, 1875; February to August and October to December, 1877; March to December, 1884; and January, 1886.

II. SECONDARY STATIONS.

1. CHANGES IN STATIONS.

Though fewer than during the preceding year, still there have been several changes in the stations of the Weather Bureau. The duty of reporting on the state of the crops being no longer incumbent on the meteorological service, and the best possible safeguarding of the shipping within the Archipelago and far beyond its boundaries being by far the most important task of the Weather Bureau, it is sought to conform the distribution of the secondary stations more and more to the requirements of this purpose. Hence, the third-class station at Bacolod and the rain station at Balanga have been suppressed, and the third-class station at Dapitan, not having telegraphic communication and no hope of obtaining such for some time to come, has been reduced to rain sation. To give it up entirely did not seem advisable, since the observations are valuable for the subsequent study of typhoons. On the other hand, the third-class station at Nueva Caceres, closed in 1907 for lack of a competent observer, has been reëstablished at the request of the people, but with the understanding that it would be transferred to Daet, within the same province, as soon as the latter place will offer sufficiently reliable means of communication by wire. Daet is of undoubted importance for storm-warning purposes, but lacking telegraphic connection with Manila, had been given up in 1904.

The absence of reliable communication had likewise been one of the reasons for reducing the second-class station at Bolinao to third class (1906). The point being of amply sufficient importance to warrant the existence of a second-class station, the Bureau accepted the offer of one of its employees, a native of the place, to go there as third-class observer with a reduction of ₱20 per month in salary, on condition that, in case he succeeded in obtaining better facilities for communication, the station would again be raised to second class and he given the appointment, which would give him his former salary with the advantage of living in his native town. He was successful and, hence, Bolinao is again a second-class station.

The rain station at Cuyo has not been suppressed, but is without observer since January 14, 1909. The former observer resigned and it has been impossible to find another on the small island. It is, of course, entirely out of question to induce a man to go from here to Cuyo on a salary of ₱15 per month. Although only a rain station, Cuyo reported daily twice by wire. As the point is altogether too important to be abandoned, there is no alternative but to raise it to third class. It is believed that with the offer of ₱30 per month we can prevail upon an observer to take the position.

2. OFFICIAL STATIONS ON JUNE 30, 1909.

Owing to the changes reported in the preceding paragraph, the number of secondary stations in operation on June 30, 1909, has been only 49, instead of 52 on the same date of 1908. The number of second-class stations has been increased by one, but that of the third-class stations diminished by 3, while one rain station is without observer. There were, consequently, in operation 7 first class, 10 second class, 23 third class, and 9 rain stations.

The first class stations were (from south to north): Cebu, Iloilo, Ormoc, Albay-Legaspi, Atimonan, Dagupan, and Aparri.

The second class stations: Tagbilaran, Surigao, Tacloban, Capiz, Calbayog, Olongapo, San Isidro, Bolinao, Vigan, and Tuguegarao.

Third class stations: Jolo, Zamboanga, Davao, Cotabato, Cagayan de Misamis, Butuan, Maasin, San Jose Buenavista, Tuburan, Romblon, Laoang, Gubat, Sumay (Guam), Calapan, Virac, Nueva Caceres, Batangas, Tarlac, Baguio, San Fernando (Union), Echague, Laoag, and Santo Domingo.

Rain stations: Isabela de Basilan, Dapitan, Yap (Western Carolines), Borongan, Masbate, Silang, San Antonio (Laguna), Baler, and Candon.

3. VOLUNTEER STATIONS.

Dr. G. J. Cullen, district health officer of Samar, continues his good work in charge of the station at Catbalogan as far as his official duties permit. When he is absent, Mrs. Cullen makes the observations and sends the telegraphic reports to Manila. The United States Army post at Parang, the Iwahig penal settlement, and Rev. Manuel Valles, S. J., chaplain of the leper colony on Culion Island, send their observations regularly, but the United States Army post at Malabang has not been heard from since October, 1908, the observer at Haight's in the Oaks, Benguet, since August, 1908, and the Jesuit missionaries at Baganga, Mindanao, since the beginning of 1908. The instruments in the hands of these parties will be recalled in the near future.

As regards the volunteer station at Dumaguete, a new attempt has resulted in a new failure. A Spanish gentleman offered to take over the equipment and make observations. He was authorized to possess himself of the instruments—which was the last he did. As a station at Dumaguete is more important than one at Bacolod, on the same island, the closing of the latter was in part due to the desire of establishing one at Dumaguete.

During the year instruments for observing temperature and rainfall have been furnished to Fort Wint, Grande Island, and to a medical officer at Infanta, Tayabas; also to the Constabulary at Bongao, the most southern of the Philippine Islands. Thus far the observations have been received very regularly.

III. PERSONNEL OF THE WEATHER BUREAU.

1. TRAINING OF APPLICANTS.

The arrangement described in last year's report, by which the salary of two positions of ₱600 per annum each are utilized for the payment of four temporary employees (at ₱25 per month each) who, while working in the Office, are preparing for observers' examinations, has given entire satisfaction. It is very annoying to have to present these candidates for examination in groups of 2 to 3. So much the more do we appreciate the unvarying kindness of the Bureau of Civil Service, which never has made the slightest difficulty in the matter. Of the young men hitherto presented, seven have passed first-class, and one second-class observer's examination.

Whenever in any way possible, it has been the practice of the Weather Bureau, introduced during last year, that applicants for positions of third-class observers come to the Central Observatory (of course, at their own expense) for a short course of instruction and practice. Experience has proved that few do well without such training. Ten third-class and one rain observer have passed through such periods of apprenticeship.

The instructions written by Rev. M. Saderra Masó, which have already been mentioned, are of great assistance in preparing aspirants for positions.

2. PENALTIES IMPOSED.

Aside from dismissal on account of continued unsatisfactory service, which has been inflicted in two cases, the Bureau has seen itself obliged to resort to pecuniary penalties in order to make observers more careful in the performance of their duties. Thus for isolated but serious blunders resulting from neglect, the following fines have been imposed: one third-class observer, one month's salary (₱30); one second-class observer, 50 per cent (₱25); another 40 per cent (₱20); and one third-class observer, 33 per cent (₱10) of their respective monthly stipends. The facts, but not the names of the guilty parties, have been brought to the knowledge of all observers, and it is hoped that this will have a salutary effect on all those whose sense of duty is stimulated more efficaciously *via* their digestive organs than *via* their conscience.

3. CHANGES IN THE PERSONNEL.

Separations.—The separations from the meteorological service have been less numerous than during the preceding year, amounting to only 12, as against 21 during the fiscal year 1908. Moreover, three of these were for a cause over which neither the employee nor the Bureau has any control, *viz.*, to death. During the typhoon of October 8, 1908, the rain observer at Baler, Angel Barcenas, was drowned; Felipe Quecquegan, assistant at Aparri, died October 16, apparently of cholera; and finally, Pio Santos, second-class observer at Calbayog, a highly valued employee with many years of service, saw himself forced to resign on February 28, dying of consumption on May 16, 1909.

The remaining nine separations have been due to the following causes: one second-class observer, one assistant calculator (₱300), two third-class observers, and one rain observer resigned; one mechanic and one third-class observer have been discharged, their employment having been temporary from the beginning; while one assistant calculator (₱300) and one third-class observer have been dismissed, the former having been found unfit for permanent appointment, and the latter having grown too negligent to be tolerated any longer.

Promotions.—After successfully passing the required examinations, two assistant calculators at ₱300 have been appointed permanently with the full salary of ₱600 corresponding to their positions. The first assistant mechanic (₱1,200) has been promoted to the position of chief mechanic (₱1,440), vacant since the death of Mr. Cesario Ubaldo. In the meanwhile two mechanics had been paid out of the salary of the position, the purpose being to find men for permanent appointment. Two second-class stations have been provided with observers by the promotion of third-class observers. One of these was qualified by examinations, the other had merited the promotion by length and excellent quality of services. One rain observer had been called to the Central Observatory as assistant calculator at ₱300, but a strange combination of circumstances forced him to resign shortly afterwards.

Reductions.—One observer-telegrapher (₱1,800) has been reduced to the position of chief observer (₱1,200). It was by no means pleasant to have to reduce a faithful employee of many years' service; but the interests of the Bureau demanded a change in the telegraph office, and all positions with salaries of ₱1,800 were held by men of equal merits. Mr. Baltasar was offered the position of chief observer in charge of Mirador Observatory, Baguio, with an annual salary of ₱1,440, but preferred to return to Ormoc, his former station, which was made vacant by transferring the incumbent to Iloilo, the chief observer of which latter station has been selected for Baguio. One assistant calculator (₱600) has been reduced temporarily to third-class observer at his own request, as already explained. Likewise in compliance with his desires, one third-class observer has been called to the Central Observatory as assistant calculator at ₱300 which means a reduction in salary of ₱5 per month. One third-class observer has been reduced to rain observer, the station in his town having suffered the corresponding reduction in class.

Appointments.—The vacancies created by the changes mentioned have been filled in part by the following appointments: Two telegraph operators, at ₱50 per month each; three assistant calculators, at ₱25 per month each; two third-class observers, at an annual salary of ₱360 each; one assistant, at ₱200 per year; one mechanic, at ₱60, and another at ₱25 per month.

Reinstatements.—Three positions have been filled by reinstatement. Two third-class observers have been readmitted to the same position, but a second-class observer who had resigned in the vain hope of obtaining a better position, had to be content to get back as third-class observer, no second-class station being vacant at the time.

IV. FINANCIAL STATEMENT.

The following statement shows the financial status of the Weather Bureau for the fiscal year 1909.

1. FUNDS AVAILABLE.

Retained balance of fiscal year 1908	₱1,077.49
Appropriation for fiscal year 1909, Act No. 1873	123,500.00
Total	124,577.49

2. EXPENDITURES.

(*a*) Disbursements:		
Salaries and wages	₱72,940.38	
Contingent expenses	28,232.07	
		₱101,172.45
(*b*) Inter-Bureau transactions		17,054.29
Total		118,226.74

3. BALANCE.

Funds available	₱124,577.49
Total expenditures	118,226.74
Balance on hand	6,350,75
Receipts	53.08
	6,403.83
Unpaid liabilities	800.80
Net balance	5,603.03

4. PRINCIPAL ITEMS OF EXPENDITURES.

Salaries and wages	₱72,940.38
Telegrams and cablegrams	16,308.29
Printing and binding	11,942.83
Rent of offices and instruments	9,000.00
Instruments, furniture and supplies	4,797.51
Postage on correspondence and publications	1,389.72
Transportation of persons and freight, per diems	1,150.12
Installations and repairs, secondary stations	518.88
Miscellaneous expenses	179.01
Total	118,226.74

The fact that the "Miscellaneous expenses" which include the rent of telephones in Manila and Cebu, the cost of electric current, etc., appear so small, is explained by the difference in the amounts of postage stamps on hand at the close of the fiscal years 1908 and 1909, respectively, which was greater by ₱584.40 on July 1, 1908. Hence the real amount of miscellaneous expenses was ₱763.41.

The total expenditure of ₱118,226.74 with only about ₱800 of outstanding liabilities seems to compare favorably with the corresponding items for the preceding fiscal year, to wit: ₱122,091.01 paid, with unpaid debts requiring the entire balance to cover. But this must not mislead. There has indeed been a real saving in telegraph expenses, owing largely to the fact that several stations were cut off from communication; but the reduction of ₱5,250.88 in the bill for printing and binding is in part merely a shifting of the burden to some future fiscal period, since the reports will have to be printed some time or other.

V. MISCELLANEA.

1. NO STANDARD NORMAL BAROMETER.

Our plan regarding the acquisition by the Observatory of a standard normal barometer has been announced prematurely when I spoke of it in last year's report: we are as far from the realization of the idea as we have been a year ago. In the first place, our determination to get a cheaper instrument than planned originally, although based on the opinion of so eminent an authority as Professor Marvin, of the United States Weather Bureau, has again been shaken. Then there were other circumstances. Finally, it is just possible that the heavy absorption of energy and money by the construction of the building on Mount Mirador has likewise been a factor which worked against this and other costly improvements being made during the past fiscal year.

2. NEGOTIATIONS ABOUT WIRELESS APPARATUS FOR MIRADOR OBSERVATORY.

In the closing paragraph of last year's report I said:

> "Mount Mirador would be a very convenient site for a wireless station from which to distribute typhoon warnings over the China Sea. But until Baguio is provided with an electric power plant, the cost will be prohibitive."

As this day is probably far off, I addressed a letter to the Honorable, the Secretary of the Interior, on September 19, 1908, suggesting that the Signal Corps, United States Army, be asked to make an estimate of the cost of a complete plant for wireless telegraphy capable of communicating under all atmospheric conditions up to a distance of 1,200 kilometers (650 nautical miles); likewise to inquire whether the necessary electrical apparatus could be constructed in the shops of the Signal Corps. The Observatory was willing to pay for the power plant and dynamo, the Insular Government to supply the rest of the equipment. The letter was returned to the Bureau on February 3, 1909, with the information that the contemplated installation would cost $15,200, exclusive of building, of which sum $3,500 would represent the cost of the power plant; moreover, that the Signal Corps could not undertake the construction of the apparatus.

In view of the heavy expense involved, it would be very desirable that some preliminary experiments be made at Baguio to learn whether special conditions prevail, which would prevent communication in all directions. While the Insular Government would lose nothing if the scheme failed on account of such peculiarities of the place, since the apparatus could be used in other parts of the Islands, Manila Observatory would have practically thrown away the greater part of ₱7,000, which it can ill afford to do.

3. THE VISIT OF THE DIRECTOR OF HONGKONG OBSERVATORY.

At the suggestion of His Excellency, Governor Lugard of Hongkong, Mr. F. G. Figg, director of Hongkong Observatory, paid a visit to the Weather Bureau in the beginning of the present year. The avowed purpose was to compare methods and equipments and to dispel the persevering impression that there is lack of cordial coöperation between Hongkong and Manila. As far as this Bureau is concerned, it has never had any cause for complaint against the present director of Hongkong Observatory. Nevertheless it is believed that the visit will be productive of some good, as it is a well-known experience that scientists are far less likely to have professional misunderstandings if they are acquainted personally and their relations are friendly. Mr. Figg stayed in Manila February 19 to 23, and it is hoped that his recollections of the visit are as pleasant as those harbored at Manila Observatory.

4. THE HONGKONG GOVERNMENT AND TELEGRAPHIC COMMUNICATION WITH SANTO DOMINGO, BATANES ISLANDS.

In the morning of July 27, 1908, there was a typhoon in the China Sea southeast of Hongkong and moving in the direction west by north. During the afternoon the storm assumed a more northerly course, the latter being northwest by west in the evening. The cyclonic center passed within 10 miles to the south of Hongkong at 1 a. m. of the 28th. Timely warning had been given by Hongkong Observatory, the approach of the storm toward the colony having been recognized at 9.30 p. m. and three bombs fired at 11.15 p. m. But Hongkong as well as Zikawei and Manila Observatories had underrated the development of the typhoon, of whose existence they were aware since the afternoon of July 26. The storm field was too limited in extent to exert a decided influence upon Formosa and Luzon. But the real situation would have been perfectly clear if the observations made at Santo Domingo, Batanes Islands, had been available. These—received long afterwards by mail—clearly showed the typhoon to have been a severe one when it crossed between Batan Island and Luzon during the early hours of July 26.

In consequence of this and previous experiences of even greater seriousness, His Excellency, F. D. Lugard, governor of Hongkong, under date of October 19, 1908, addressed a communication to the Honorable, the Governor-General of the Philippine Islands, regarding the intentions of this Government as to the establishment of telegraphic communication by cable or wireless apparatus, between Santo Domingo and some point on the Island of Luzon. Having been requested to give his opinion, the Director of the Weather Bureau pointed out the importance of the scheme, but also the inadvisability of a cable, which aside from the heavy first cost, is very liable to be rendered useless by the interruption of the land-line from Aparri to Manila. He suggested a wireless telegraph station at Santo Domingo of sufficient power to communicate directly with Manila and Hongkong.

In his reply to Governor Lugard, the Governor-General stated that he believed the funds necessary for a wireless station at Santo Domingo could be made available; otherwise he would appeal to the Legislature for an appropriation for the purpose. Unfortunately, the funds were not on hand and the appropriation has been refused by the Assembly.

While in Washington, cognizant of the request from Hongkong, but ignorant of the reply, Fr. Zwack talked the matter over with a naval expert in wireless telegraphy, who incidentally remarked that in view of the great value which such station would have for shipping in general and for the United States men-of-war in oriental waters in particular, an application by the Chief Executive of the Philippine Islands to the United States Government that the Navy Department establish and maintain the station on Batan Island would probably meet with favorable consideration.

The great importance of the suggested station undoubtedly justifies the outlay for the erection and maintenance even under present circumstances. But its value will be vastly increased when all the larger steamers plying in these waters will have been equipped with wireless apparatus. This idea may appear little short of being ridiculous at present, but this condition of things is bound to come. After not many years radio-telegraphic instruments on board steamers will be as common as electric light is to-day.

5. MIRADOR OBSERVATORY, BAGUIO, BENGUET.

In January, 1909, the building on Mount Mirador, Baguio, Benguet, was sufficiently advanced to admit of installing a microseismograph which, as mentioned before, gives good results. A number of other first-class instruments have since then been sent up and mounted.

Two piers have been erected, one in the meteorological park, the other farther away from the house; the former will serve for observations of latitude and time, the latter for absolute magnetic measurements. The azimuths of both have been determined with the precision obtainable with a theodolite, which is sufficient for the purpose.

The attempt at an exact determination of the latitude of one of the piers by the method of equal zenith distances of stars failed, owing to bad nights and frequent interruptions by heavy rains.

The Weather Bureau is under great obligations to the Director of Posts for the construction of a telegraph line from the Baguio telegraph office to the new observatory. This will enable the latter to receive the time signals direct from the Observatory clock at Manila. The arrangements were not quite complete on June 30. The first time signal was transmitted on July 9.

The Philippine Legislature having made provisions for the salaries of the employees, the branch observatory on Mount Mirador has begun its regular work on July 1, 1909.

PART II.

HOURLY METEOROLOGICAL OBSERVATIONS MADE AT THE CENTRAL OBSERVATORY DURING THE CALENDAR YEAR 1909.

LETTER OF TRANSMITTAL.

Department of the Interior, Weather Bureau,
Manila, July 3, 1912.

Sir: I have the honor of transmitting herewith Part II of the Meteorological Report of the Weather Bureau for the year 1909. The same contains the hourly observations made at the Central Observatory during the calendar year 1909.

Very respectfully,

Miguel Saderra Masó,
Acting Director.

Hon. Dean C. Worcester,
Secretary of the Interior, Manila, P. I.

INTRODUCTION.

Part II of our report for 1909 contains the meteorological observations made during the year at the Central Observatory at Manila. The hours of observations are given in Insular standard time; that is, in the time of the one hundred and twentieth meridian east of Greenwich, adopted by order of the United States Government on September 6, 1899. It is to be noted that the observations of atmospheric pressure, temperature, relative humidity, vapor tension, and the direction and force of the wind are hourly, read directly between the hours 6 a. m. and 7 p. m., while for the hours from 8 p. m. to 5 a. m. they are taken from self-registering apparatus. The hourly observations of the direction, form, and amount of clouds are made from 7 a. m. until 6 p. m. only. Each of the tables of hourly observations shows also the respective hourly, daily, and monthly means. The extreme daily values of the various elements, together with the times of their occurrence, are united into a separate table. The thermometers are placed in the Observatory park, 1.5 meters above the ground.

The readings of the barometer have not been corrected for gravity; this correction would be —1.72 mm.

All observations contained in this report are expressed in the metric system, continuing the practice adopted at the time of the reorganization of the Weather Bureau. As in former reports, we have arranged the observations according to month.

EXPLANATION OF SYMBOLS (BEAUFORT'S LETTERS AND INTERNATIONAL WEATHER SYMBOLS).

Symbol.	Equal to—	Symbol.	Equal to—
Ci.	Cirrus.	q	Squally.
Ci.-S.	Cirro-stratus.	u	Ugly or threatening weather.
Ci.-Cu.	Cirro-cumulus.	v	Visibility of distant objects.
A.-Cu.	Alto-Cumulus.	w	Wet or heavy dew.
A.-S.	Alto-stratus.	●	Rain.
S.-Cu.	Strato-cumulus.	≡	Fog or mist.
N.	Nimbus.	⌓	Dew.
Cu.	Cumulus.	⊕	Solar corona.
Cu.-N.	Cumulo-nimbus.	○	Solar halo.
S.	Stratus.	◒	Lunar corona.
Fr.-Cu.	Fracto-cumulus.	∪	Lunar halo.
Fr.-N.	Fracto-nimbus.	↯	Lightning.
Fr.-S.	Fracto-stratus.	☈	Thunderstorm.
S.-cf.	Stratus-cumuliformis.	⊤	Thunder.
N.-cf	Nimbus-cumuliformis.	↙	Strong wind.
M.-Cu.	Mammato-cumulus.	⌒	Rainbow.
b	Clear, blue sky.	∞	Dust haze.
c	Partial clouds.	S.	Smooth sea.
d	Drizzling or light rain.	T.	Tide rips.
g	Gloomy, or dark, stormy-looking weather.	L.	Long rolling sea.
o	Overcast.	M.	Moderate sea or swell.
p	Passing showers of rain.	R.	Rough sea.
		H.	Heavy sea.

NOTE.—The intensity of any individual phenomenon may be distinguished by the figures of ° and ^{2}, which should be used as exponents of the symbols, so that ° indicate slight, and ^{2} strong; e. g., ●°=slight rain, ●^{2}=heavy rain. Figures in heavier type represent extreme values.

DAILY GENERAL REMARKS.

1----d in the morning; gusty NE winds at 0. 55 p.
2----⊕; d in the afternoon; ●^{0} at night.
3----●^{0} in the morning; d in the afternoon.
4----♎^{2}, ≡ a.
5----♎^{0}, ≡ a.
6----Slight coloration of upper clouds at sunset.
7----♎, ≡ a.
8----♎, ≡ a.
9----Convergence of Ci. toward north in the morning.
10----⊔^{0}, ♎, ≡ a.; coloration of upper clouds at sunrise and sunset.
11----≡ a.
12----♎^{0}, ≡ a.; ⌒ p.
13----≡ a.; ● at night.
14----≡, ● in the morning; d^{0} in the afternoon.
15----≡ a.
16----♎, ≡ a.
17----d^{0} in the afternoon.
18----♎, ≡ a.; coloration of clouds at sunrise; d^{0} 2. 50 p.; ●^{0} at night.
19----≡, ●^{0} in the early morning.
20----♎^{2}, ≡ a.
21----T^{2} NE quad., ●^{2} in the afternoon.
22----≡, convergence of Ci. toward S in the morning.
23----♎^{2}, ≡ a.
24----♎, ≡ a.; convergence of Ci. toward SSE in the afternoon, coloration of Ci. at sunrise and sunset.
25----≡ a.
26----Coloration of Ci. at sunset.
27----♎^{0}, ≡ a.; coloration of Ci. at sunset.
28----♎, ≡ a.; coloration of upper clouds at sunrise.
29----♎, ≡, d^{2} in the morning.
30----♎, ≡ a.
31----● in the morning and afternoon.

DAILY GENERAL REMARKS.

1----≡, ⌓ a.
2----Coloration of upper clouds at sunset.
3----⌓, ≡ a.
4----Slight coloration of clouds at sunset.
5----d° in the morning.
6----●° in the forenoon and afternoon.
7----Gusty Ely winds in the afternoon.
8----≡ a.; bands of Ci. extended from SSE to NNW in the morning, and convergent toward SSE in the afternoon.
9----⌓, ≡ a.
10----≡ a.
11----≡ a.
12----⌓°, ≡ a.; d 6. 37 p.
13----≡ a.
14----d², ⌒ in the afternoon; partial coloration of clouds at sunset.
15----⌓, ≡, d in the morning; ● 0. 10 p.
16----⌓°, ≡ a.
17----≡ a.
18----≡ a.; d° 5. 20 p.; ●° at night.
19----⌓°, ≡; a.; ⊤ NNW, p° in the afternoon.
20----⌓², ≡ a.; ϟ° SW, NNE in the afternoon; coloration of clouds at sunset.
21----⊤ E, ● in the afternoon.
22----Coloration of upper clouds at sunset.
23----⌓, ≡ a.; coloration of upper clouds at sunrise and sunset.
24----Ci. extended from NE to SW in the morning; ⊕°p.
25----⌓, ≡ a.; coloration of upper clouds at sunrise and sunset; ⊕² p.
26----Somewhat gusty SE winds in the afternoon.
27----As yesterday.
28----⌓, ≡ a.; convergence of Ci. toward SSW in the morning and afternoon; gusty SE winds in the afternoon.

DAILY GENERAL REMARKS.

1----⚡° NE quadrant in the afternoon; coloration of clouds at sunset.
2----Rain clouds toward N in the afternoon.
3----Somewhat gusty Ely winds in the warmer hours.
4----○ a.
5----Somewhat gusty SEly winds in the afternoon.
6----Somewhat gusty ESE winds in the forenoon; ⊤° NNE 2.10 p.
7----v E, in the afternoon.
8----Slight coloration of upper clouds at sunset.
9----Somewhat gusty Wly winds in the afternoon.
10----⚡ toward S then successively to SE, NE, N and NW in the afternoon and evening.
11----⊤° NE 4.10 p.; p° 6.05 p.
12----○ noon; d 1.10 p.; ⊤ NE 1.15 p.
13----○, ●, ⚡ SSW, NNW in the afternoon.
14----○ a. p.; < in the evening.
15----⚡° SE and SW quadrants in the morning; ⚡ E, SW, ●^{2} in the afternoon; < various points in the evening.
16----○ p.
17----○ a., ⚡° SSW then to SE quadrant, ⌒ in the afternoon; d° 6.03 p.
18----●^{2} in the early morning; ●° in the morning and at night.
19----●^{2} in the early morning; d in the morning; d, p in the afternoon; gusty WSW winds in the afternoon and at night.
20----⌒ a.; ● in the morning and at night; d°, ○° in the afternoon; gusty WSW winds with a gale force from 7 to 7.23 p. m.
21----●° in the early morning; ○ a. p.; gusty WSW winds in the afternoon.
22----Gusty WNW winds early in the morning; ● in the morning; ●° in the afternoon and at night; ⊤ SE, NE quadrant in the evening.
23----d° in the morning; ●, ⚡ various points in the evening.
24----< various points in the evening.
25----● in the forenoon, afternoon and at night; ⚡ W in the forenoon, ⚡ NE and SE quadrants in the afternoon; < NW quadrant in the evening.
26----Irregular veil of Ci.-S. in the forenoon; coloration of upper clouds at sunset.
27----⚡ S, NE, ●^{2} in the afternoon.
28----○ noon; ⚡° NE quadrant in the afternoon; ⚡ SE quadrant, < NE in the evening; ⚡ W at night.
29----≡ a.; ○, ⚡ NE quadrant, ●° in the afternoon; intense coloration of clouds at sunset; ⌓ p.
30 ⚡ E and S quadrant, ● in the afternoon.

DAILY GENERAL REMARKS.

1----d° 10.30 a.; ⛈° SE, SW, NW in the evening.
2----T E in the forenoon; ●, ⛈ SW quad., then successively to the NW and N quad. in the afternoon.
3----⊕, heavy thundershowers, came from SE quad., in the afternoon; ↯ SW, W in the evening.
4----●° especially in the morning; ⊕ p.
5----○° a.; T N in the afternoon; ● at midnight.
6----● during the early morning and at night; ○° a.
7----●°, ○° a.; d° 3p.
8----d in the morning, afternoon and night.
9----d, ○° in the morning; T SW in the afternoon; ● at night.
10----○° a.; p p.
11----≡ a.; somewhat gusty WSW winds in the afternoon; ● at night.
12----○° a.; ● p.
13----Frequent ● or d with somewhat gusty SWly winds.
14----d° in the morning; ⛈ S in the afternoon; ● p.
15----Bands of Ci.–S. extended from N to S early in the morning; ○ a. p.; local ⛈, came from E quad.; ● in the evening.
16----Filaments of Ci. extended from N to S early in the morning; ⛈ E, SSW, NW, ● in the afternoon and evening.
17----● a.; ○, d, T S in the afternoon.
18----○ a.; ⛈ SW quad. in the afternoon.
19----○ a.; ⛈ W, d in the afternoon; ↯ W in the evening; ● at night.
20----●° in the early morning; d° 4 p.; ● at night.
21----Heavy thundershowers in the afternoon; ↯ W in the evening.
22----○° a.; T NNE, SE in the afternoon; d° 6 p.; ● at night.
23----○ a.; ⛈ NE, d° in the afternoon
24----○ a. p.; thundershowers in the afternoon; ⌓ in the evening.
25----●°, ⛈ NNE in the forenoon; ⛈ SSE, ○, convergence of Ci. toward NE in the afternoon; ●° in the evening and night.
26----Rainy weather especially in the morning with some gusty SWly winds.
27----Somewhat squally and rainy weather with some thunders.
28----As yesterday.
29----Do.
30----Rainy in the morning; d, ⌓ in the evening.
31----Coloration of upper clouds at sunset.

OBSERVATIONS FOR AUGUST, 1909.

ATMOSPHERIC PRESSURE, 700mm+.

DAILY GENERAL REMARKS.

1----● in the early morning; ○ a. p.

2----d° 10 a., 6. 15 p.; ○, convergence of Ci. toward WNW in the afternoon; ⊤° NE quad. in the evening; ● at night.

3----● in the morning; somewhat gusty WSW winds in the afternoon.

4----● in the early morning and at night; somewhat gusty WSW winds in the morning and afternoon.

5----Gusty SWly winds in the afternoon and night; ● in the evening and night.

6----○° a.; ● in the morning and at night; convergence of Ci. toward SE in the afternoon.

7----Ci. convergent toward E in the morning, and extended from NE to SW during the afternoon; ↯ N in the evening.

8----○ a. p.; gusty WSW winds in the afternoon; coloration of clouds at sunset.

9----○, filaments of Ci. extended from NNE to SSW in the morning.

10----Convergence of Ci. toward ENE early in the morning and toward NNW in the evening; somewhat gusty winds during the afternoon.

11----Somewhat gusty SW winds in the afternoon and evening.

12----⌓, ○ a.; convergence of Ci. toward NNW in the morning and afternoon.

13----○ a.; coloration of upper clouds at sunrise and sunset; slight convergence of Ci. toward NNE during the morning and in the afternoon.

14----⛈ NE quad. in the afternoon; ↯ N in the evening.

15----↯ N in the evening; ●° at night.

16----●, ⛈ S in the morning; intense coloration of upper clouds at sunset.

17----Slight convergence of Ci. toward E in the morning; ⛈ NE in the afternoon; ↯ ESE, N, W in the evening.

18----⌓ filaments of Ci. extended from E to W early in the morning; d°, ⛈ NE quad., somewhat gusty winds in the afternoon.

19----⛈ ENE in the morning; ● at night.

20----⛈ ESE, SW quad. in the afternoon; ↯ N, ENE in the evening.

21----●° in the early morning; d, ⛈ various points in the afternoon.

22----⛈ N, NE in the afternoon; ↯ NW, W in the evening.

23----⌓ a.

24----Weather generally fair.

25----⌓, Ci. extended from NE to SW in the morning; ↯ N in the evening.

26----○ a. p.; ⛈ NE in the afternoon; ⊤ N, ↯ NW in the evening.

27----⌓ a.; ⊤° 3. 35 p.; ⛈ N, E, WNW in the evening; ● at night.

28----●, local ⛈, came from NE quad. and passed by NW quad., in the afternoon.

29----≡ a.; ●, ⛈ NE, NW in the afternoon; ↯ N in the evening.

30----⌓ a.; ⛈ N, E in the afternoon; ↯ N in the evening.

31----⌓, ○°, ●°, Ci. extended from ENE to WSW in the morning; ⊤ ENE in the afternoon.

DAILY GENERAL REMARKS.

1----⌓ a.; [☇ NE quad. in the afternoon; ☇ NNW in the evening.
2----[☇ N, SW quad. in the forenoon; ●, [☇ E quad. in the afternoon; ☇ NW in the evening.
3----● in the morning and night; [☇ N in the afternoon; ☇ S in the evening.
4----●°, ⌒ in the afternoon; [☇ E, T^2 S, ☇ NNW in the evening.
5----[☇° in the early morning; d 2 p.
6----⌓ a.; T° N, ● in the afternoon; d in the evening.
7----● in the morning and afternoon; [☇ NE in the afternoon.
8----Somewhat rainy weather with gusty SWly winds, especially in the afternoon; ⊕ p.
9----Gusty SWly winds at intervals with some d and ●° in the early morning and afternoon.
10----Somewhat gusty SWly winds at intervals with some ● especially toward midnight.
11----○ p.; ● in the morning and night with somewhat gusty SWly winds.
12----●° in the forenoon and afternoon; [☇° N in the afternoon.
13----☇ E in the evening.
14----Convergence of Ci. toward E at sunrise and sunset; gusty WSW winds during the afternoon; coloration of upper clouds at sunset; ● at night.
15----Convergence of Ci. toward E in the morning; somewhat gusty WSW winds at intervals; d 10.50 a., 1.45 p.; ● at night.
16----Rainy in the morning with some gusty SWly winds.
17----Frequent ● and d especially in the afternoon with gusty Wly winds.
18----Rainy and somewhat squally weather.
19----Rainy especially in the afternoon with gusty SWly winds in the early morning.
20----● in the morning and afternoon and gusty WSW winds in the afternoon.
21----Convergence of Ci. toward NNE in the evening.
22----Convergence of Ci. toward N in the morning; ○ a. p.
23----○ at noon; [☇ NE, ● in the afternoon; ☇ NW in the evening.
24----●, [☇ NE quad. in the early morning; d° 4.55 p., ● at night.
25----●° a.; T SSW in the afternoon; d in the evening.
26----Convergence of Ci. toward WNW during the morning; ○° at noon; ⌒, [☇ SW, NE in the afternoon; ●, ☇ N, NE, SE in the evening.
27----☇ NNE, NE in the evening.
28----T NE, SW, d° in the afternoon.
29----T° SE quad.; ☇ NNW in the evening.
30----d 2.15 p., 7.15 p.; coloration of clouds at sunset; ☇ NW, SSW in the evening.

OBSERVATIONS FOR OCTOBER, 1909.

DAILY GENERAL REMARKS.

1----⌓, d in the morning; p 1.20p.; coloration of upper clouds at sunset.
2----○, convergence of Ci. toward NNE in the afternoon; somewhat gusty SWly winds in the afternoon and night; coloration of upper clouds at sunset; ⩽ SSW in the evening.
3----● in the morning; somewhat gusty WSW winds in the forenoon and afternoon.
4----Frequent ● or d, especially in the early morning; gusty WSW winds in the forenoon, afternoon and evening.
5----Convergence of Ci. toward ENE in the forenoon; ○, gusty Wly winds in the afternoon; p, coloration of upper clouds in the evening.
6----p at night.
7----● a. p.; ⊤ NE in the afternoon; ⩽ S in the evening.
8----○² a.; ⌈⩽° S in the afternoon.
9----○ a. p.; p at night.
10----c
11----● 5.38a.; ⩽ NE in the morning; ⩽ WSW in the evening.
12----Coloration of upper clouds at sunrise; ○² a.; p in the afternoon.
13----b
14----⌓ a.
15----⌓ a.
16----≡ a. ○², ⌈⩽ N, ● in the afternoon; coloration of upper clouds at sunset.
17----Moderate to strong gale from W in the afternoon with some passing rains.
18----●, gusty SWly winds during the early morning; ○ p.; ● in the evening.
19----d in the forenoon; ● in the afternoon.
20----⌈⩽° SE quad. in the evening.
21----⊤ NNE, ⌒, ● in the afternoon; ⩽ NNW in the evening.
22----Coloration of upper clouds at sunset.
23----● p., gusty Wly winds at night.
24----Moderate WSW gale in the early morning; ● a.; ⍦ in the evening.
25----d at night.
26----● in the early morning; ⏝ in the evening.
27----d° a.; ● p.
28----d°, ⌈⩽ ENE in the afternoon.
29----d° in the morning; ●° in the afternoon.
30----Slight convergence of Ci. toward WNW in the morning.
31----○ a.; convergence of Ci. toward W in the forenoon and afternoon.

OBSERVATIONS FOR NOVEMBER, 1909.

DAILY GENERAL REMARKS.

1----Coloration of clouds at sunrise.
2----≡, somewhat gusty NEly winds in the forenoon and afternoon.
3----●° a.; d in the afternoon.
4----d° in the afternoon.
5----b
6----○ a.; slight convergence of Ci. toward NE in the afternoon.
7----≡ a.
8----○° a.
9----≡ a.; ●° in the evening.
10----≡ a.; heavy thundershowers in the afternoon.
11----≡, ⌓ a.
12----⌓°, coloration of clouds in the early morning; ⌈↘° NE at noon; ●^{2} at night.
13----d in the morning; ⌈↘ N, ● in the afternoon.
14----⌒ a. p.; d in the morning; ● p.
15----d in the early morning.
16----≡ a.
17----● p.
18----≡, slight convergence of Ci. toward SE in the morning; ● in the morning and afternoon.
19----⌣ in the evening.
20----≡ a.; ●, p in the forenoon; d in the afternoon.
21----Somewhat gusty NEly winds in the forenoon and afternoon.
22----d in the evening.
23----Somewhat gusty Nly winds in the forenoon and afternoon.
24----d, ● p.
25----⌣ in the evening
26----Gusty NE winds at noon.
27----Coloration of upper clouds at sunset.
28----d° in the morning; somewhat gusty N winds in the afternoon; coloration of clouds at sunset.
29----⌒^{2} a.
30----Somewhat gusty W winds in the afternoon.
31----≡, d in the morning.

PART III.

METEOROLOGICAL OBSERVATIONS MADE AT THE SECONDARY STATIONS DURING THE CALENDAR YEAR 1909.

LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR, WEATHER BUREAU,
Manila, September 26, 1912.

SIR: I have the honor to submit the Annual Report for 1909, Part III, containing meteorological observations of the secondary stations during 1909.

MIGUEL SADERRA MASÓ, *Acting Director.*

Hon. DEAN C. WORCESTER,
Secretary of the Interior, Manila, P. I.

INTRODUCTION.

In this volume (Part III) of the report of the Director of the Weather Bureau for 1909 we publish the meteorological observations made in the various stations which at present constitute the meteorological service of the Philippines, a service established by Act No. 131 of the Philippine Commission May 22, 1901.

In Part II of the report for 1902, pages 52 to 60, will be found a detailed account of the establishment and organization of these branch stations and a list of the instruments with which they are equipped, according to their class.

The reports of the various observers are carefully collated and examined at the Central Observatory, but it is evident that the Directors can not assume the full responsibility for the accuracy of these observations. As every meteorologist knows, in observations of this kind much must be left to the conscientious care of the observer. Hence, while we take this opportunity to express our confidence in our observers, we think it proper to subjoin the following list, which gives some particulars about the stations and also the names of the observers who are primarily responsible for the accuracy of the observations published in this volume (Part III) of the Annual Report of the Weather Bureau.

SECONDARY STATIONS AND OBSERVERS OF THE WEATHER BUREAU.

REMARKS.

The hours of observation at the first and second class stations are 2 a. m., 6 a. m., 10 a. m., 2 p. m., 6 p. m., 10 p. m.; at the third and fourth class stations, 6 a. m. and 2 p. m. The time used is that of the one hundred and twentieth meridian east of Greenwich.

The barometer readings are reduced to sea level and 0°C., but no correction has been applied to eliminate the effect of gravity depending on the latitude of the place of observation.

---

[a] The height of the barometer of this station having been rectified in May, 1911, a correction of —0.20 mm. had to be applied to all the barometric readings for 1909, as compared with those published in the Monthly Bulletin of the same year. This will hold good likewise for the Annual Report of 1910. The error in the height of this barometer seems to go back as far as April 23, 1908.

TACLOBAN.

[φ=11° 15′ N; λ=125° 00′ E; barometer above sea, 3.4 meters; gravity correction not applied, —1.82 mm.]
